

# Action Plan: DATA GOVERNANCE

Capability Levels	Reactive			Responsive			Proactive			Predictive		
<p><b>Data Governance:</b> Data governance refers to the processes and structures in place to oversee and manage the Data Strategy, data and information needs, conflicts, definitions and gaps within an organization. The purpose of data governance is to improve data quality, increase data literacy and maximize data use in achieving organization goals.</p>												
<p><b>2B:</b> To what extent are data issues and opportunities prioritized, resourced, and managed within your organization?</p>	<p>Motivated individuals or groups within a department take ownership of their priority data needs and do what they can within their control; IT generally makes most data decisions.</p>			<p>Teams are formed to address data management for one-off initiatives when a problem or new clinical/business case requires it and depends on the project team to execute.</p>			<p>A formal data governance project management structure is emerging in the organization to ensure that priority goals and objectives can be met and the data needed is available.</p>			<p>Cross-functional team(s) meets regularly to ensure that data definitions and data requirements are integrated, standardized and documented, and data access is optimized both across the organization and with external partners.</p>
