

La Clinica

Date: October 16

Location: Medford, Oregon

Site Visit Deep Dive

Risk stratification and data management: La Clinica will do a deep dive on how they collect SDOH data and conduct risk profiling. They will demonstrate how they use tableau as part of their data management strategy and share what they're learning about their tools for predictive modeling.

Alignment between models of care and payment:

La Clinica will do a deep dive into their team-based care model and how it is financed. They'll share how they have created partnerships with their payers to support value based care. They will share how they track their financial performance and how they are able to align their care team model with their current reimbursement systems and incentives.

Organization Description

EHR: EPIC

Data Analytics Tools: Tableau

La Clinica was originally founded in 1988 to serve the needs of the migrant and seasonal farm worker community in Jackson County, Oregon. La Clinica has since expanded to provide primary and preventive health care through 7 neighborhood health centers, 10 school-based clinics, and a mobile health center. Those services include medical, dental, vision and wellness. The state of Oregon has designated many of their sites as Tier 5 patient-centered primary care homes. This state-wide payment-reform project is testing new ways to encourage high quality care for Medicaid patients while keeping payments to organizations steady. La Clinica provided 147,365 care visits for 29,736 people in 2017.
