Methamphetamine Protocol by Dimitri Bacos, MD

- Screening by either Primary care or IBH for any methamphetamine use

- Then, using DSM 5 criteria, diagnose mild, moderate or severe methamphetamine use disorder (or no use disorder) [see Appendix A for criteria]

- Enroll into MAT with assistance of MAT case worker
  - MAT CW does step-in during provider visit (PCP visit, Psychiatry visit, therapy visit)
  - Schedule intake with SUD CW according to designated slots/times
  - SSP referral to MAT CW

- Use the self-assessment Mood Disorder Questionnaire/MDQ [see Appendix B] to rule out history of manic episode and use modified MDQ [see Appendix C] to continuously screen for mania at subsequent visits

- Use PHQ-2 & PHQ-9 to assess initial and ongoing depressive symptoms [see Appendix D]
  - First do PHQ-2 and if screens positive (score of 3 or higher), proceed to PHQ-9

- If they screen negative for mania, and if they show up for their first shared medical visit or one-to-one visit with provider, then the first prescription is given (7 day supply for Tier 2, just as is done with buprenorphine patients)
  - ...Dose escalations can only happen when the patient attends the group (or, for those clients not appropriate for group, when they meet individually with CM) plus visits with prescriber (either together, as in the case of Shared Medical Visit, or during a separate visit with the prescriber)

- Initial Provider intake: 40 minutes
  - MDQ beforehand
  - PHQ-2 beforehand → if positive, proceed to PHQ-9 during visit
  - Review previous psychiatric medication history (i.e. previous AD’s, mood stabilizers, antipsychotics prescribed)

- F/u provider visits
  - Modified MDQ completed by patient at each visit
  - PHQ-2 with reflex to PHQ-9 (if PHQ is +) at each visit
  - 7 day (or, to avoid complications, dispense extra day of medication, i.e. 8 tabs) script submitted to pharmacy by prescriber throughout Tier 2, then 14 day script at Tier 3, etc.
  - If modified MDQ is positive (score of 7 or higher), the antidepressant medication will be discontinued and the patient should be referred to psychiatry

- SEE APPENDIX E FOR TITRATION SCHEDULE & GUIDELINES FOR MEDICATION CHOICE
### APPENDIX A: DSM-5 Criteria for Methamphetamine Use D/o

A problematic pattern of methamphetamine use leading to clinically significant impairment or distress, as manifested by at least two of the following, occurring within a 12-month period:

Check all that apply

1. Methamphetamine is often taken in larger amounts or over a longer period than was intended.

2. There’s a persistent desire or unsuccessful efforts to cut down/control methamphetamine use.

3. A great deal of time is spent in activities to obtain the methamphetamine, use the methamphetamine, or recover from its effects.

4. Craving, or a strong desire or urge to use methamphetamines.

5. Recurrent methamphetamine use resulting in a failure to fulfill major role obligations at work, school, or home.

6. Continued methamphetamine use despite having persistent or recurrent social or interpersonal problems caused by or exacerbated by the effects of methamphetamines.

7. Important social, occupational, or recreational activities are given up or reduced because of methamphetamine use.

8. Recurrent methamphetamine use in situations in which it is physically hazardous.

9. Continued methamphetamine use despite knowledge of having a persistent or recurrent physical or psychological problem that’s likely to have been caused or exacerbated by the substance.

10. Tolerance, as defined by either of the following:
   a. A need for markedly increased amounts of methamphetamines to achieve intoxication or desired effect
   b. A markedly diminished effect with continued use of the same amount of methamphetamine

11. Withdrawal, as manifested by either of the following:
   a. The characteristic methamphetamine withdrawal syndrome
   a. The same (or a closely related) substance is taken to relieve or avoid withdrawal symptoms

**Total number of symptoms: _____**

- **Mild** = 2–3 symptoms  - **Moderate** = 4–5 symptoms  - **Severe** = 6 or more symptoms

APPENDIX B: THE MDQ

Scoring Algorithm:

**POSITIVE SCREEN**
All three of the following criteria must be met:

**Scoring:**
- Question 1:
  7/13 positive (yes) responses
  
  +

- Question 2:
  Positive (yes) response

  +

- Question 3:
  “moderate” or “serious” response
INSTRUCTIONS: Please answer each question as best you can.

1. Has there ever been a period of time when you were not your usual self and...

   - you felt so good or so hyper that other people thought you were not your normal self or you were so hyper that you got into trouble?
   - you were so irritable that you shouted at people or started fights or arguments?
   - you felt much more self-confident than usual?
   - you got much less sleep than usual and found that you didn’t really miss it?
   - you were more talkative or spoke much faster than usual?
   - thoughts raced through your head or you couldn’t slow your mind down?
   - you were so easily distracted by things around you that you had trouble concentrating or staying on track?
   - you had much more energy than usual?
   - you were much more active or did many more things than usual?
   - you were much more social or outgoing than usual, for example, you telephoned friends in the middle of the night?
   - you were much more interested in sex than usual?
   - you did things that were unusual for you or that other people might have thought were excessive, foolish or risky?
   - spending money got you or your family in trouble?

2. If you checked YES to more than one of the above, have several of these ever happened during the same period of time?

3. How much of a problem did any of these cause you - like being able to work; having family, money or legal troubles; getting into arguments or fights?

   - No problem
   - Minor problem
   - Moderate problem
   - Serious problem

4. Have any of your blood relatives (i.e. children, siblings, parents, grandparents, aunts, uncles) had manic-depressive illness or bipolar disorder?

5. Has a health professional ever told you that you have manic-depressive illness or bipolar disorder?

This instrument is designed for screening purposes only and is not to be used as a diagnostic tool. See first pages of pad for scoring algorithm.

### APPENDIX C: How have you been feeling lately? (based on MDQ)

**OVER THE PAST 10 DAYS....**

<table>

**How much of a problem to any of these behaviors caused you – like being able to work; having family or money or legal troubles; getting into arguments or fights? (Circle one choice below):**

- No Problem
- Minor Problem
- Moderate Problem
- Serious Problem
The Patient Health Questionnaire-2 (PHQ-2) - Overview

The PHQ-2 inquires about the frequency of depressed mood and anhedonia over the past two weeks. The PHQ-2 includes the first two items of the PHQ-9.

- The purpose of the PHQ-2 is not to establish final a diagnosis or to monitor depression severity, but rather to screen for depression in a “first step” approach.
- Patients who screen positive should be further evaluated with the PHQ-9 to determine whether they meet criteria for a depressive disorder.

Clinical Utility
Reducing depression evaluation to two screening questions enhances routine inquiry about the most prevalent and treatable mental disorder in primary care.

Scoring
A PHQ-2 score ranges from 0-6. The authors\(^1\) identified a PHQ-2 cutoff score of 3 as the optimal cut point for screening purposes and stated that a cut point of 2 would enhance sensitivity, whereas a cut point of 4 would improve specificity.

The Patient Health Questionnaire-2 (PHQ-2)

<table>
<thead>
<tr>
<th>Over the past 2 weeks, how often have you been bothered by any of the following problems?</th>
<th>Not At all</th>
<th>Several Days</th>
<th>More Than Half the Days</th>
<th>Nearly Every Day</th>
</tr>
</thead>
<tbody>

<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>e. Poor appetite or overeating.</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>f. Feeling bad about yourself, or that you are a failure, or have let yourself or your family down.</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>g. Trouble concentrating on things, such as reading the newspaper or watching TV.</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>h. Moving or speaking so slowly that other people could have noticed. Or the opposite; being so fidgety or restless that you have been moving around more than usual.</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
<tr>
<td>i. Thoughts that you would be better off dead or of hurting yourself in some way.</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

2. If you checked off any problem on this questionnaire so far, how difficult have these problems made it for you to do your work, take care of things at home, or get along with other people?

☐ Not difficult at all  ☐ Somewhat difficult  ☐ Very difficult  ☐ Extremely difficult

TOTAL SCORE   _______________
Instructions – How to Score the PHQ-9

Major depressive disorder is suggested if:
- Of the 9 items, 5 or more are checked as at least ‘more than half the days’
- Either item a. or b. is positive, that is, at least ‘more than half the days’

Other depressive syndrome is suggested if:
- Of the 9 items, a., b. or c. is checked as at least ‘more than half the days’
- Either item a. or b. is positive, that is, at least ‘more than half the days’

Also, PHQ-9 scores can be used to plan and monitor treatment. To score the instrument, tally each response by the number value under the answer headings, (not at all=0, several days=1, more than half the days=2, and nearly every day=3). Add the numbers together to total the score on the bottom of the questionnaire. Interpret the score by using the guide listed below.

Guide for Interpreting PHQ-9 Scores

<table>
<thead>
<tr>
<th>Score</th>
<th>Recommended Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-4</td>
<td>Normal range or full remission. The score suggests the patient may not need depression treatment.</td>
</tr>
<tr>
<td>5-9</td>
<td>Minimal depressive symptoms. Support, educate, call if worse, return in 1 month.</td>
</tr>
<tr>
<td>10-14</td>
<td>Major depression, mild severity. Use clinical judgment about treatment, based on patient’s duration of symptoms and functional impairment. Treat with antidepressant or psychotherapy.</td>
</tr>
<tr>
<td>15-19</td>
<td>Major depression, moderate severity. Warrants treatment for depression, using antidepressant, psychotherapy or a combination of treatment.</td>
</tr>
<tr>
<td>20 or higher</td>
<td>Major depression, severe severity. Warrants treatment with antidepressant and psychotherapy, especially if not improved on monotherapy; follow frequently.</td>
</tr>
</tbody>
</table>

Functional Health Assessment

The instrument also includes a functional health assessment. This asks the patient how emotional difficulties or problems impact work, things at home, or relationships with other people. Patient responses can be one of four: Not difficult at all, Somewhat difficult, Very difficult, Extremely difficult. The last two responses suggest that the patient’s functionality is impaired. After treatment begins, functional status and number score can be measured to assess patient improvement.

For more information on using the PHQ-9, visit www.depression-primarycare.org
APPENDIX F: Medication Titration Schedules and Guidelines for Choosing One Medication Over the Other

Remeron/mirtazapine

<table>
<thead>
<tr>
<th>Visit</th>
<th>Dose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visit one</td>
<td>15 mg</td>
</tr>
<tr>
<td>Visit two</td>
<td>30 mg</td>
</tr>
<tr>
<td>Visit three</td>
<td>45 mg</td>
</tr>
</tbody>
</table>

Wellbutrin XL/bupropion ER

<table>
<thead>
<tr>
<th>Visit</th>
<th>Dose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visit one</td>
<td>150 mg</td>
</tr>
<tr>
<td>Visit two</td>
<td>300 mg</td>
</tr>
<tr>
<td>Visit three</td>
<td>450 mg</td>
</tr>
</tbody>
</table>

- **Caveat:** The patient must agree/consent verbally to these dose escalations, there will be a subpopulation who will want to stay at smallish doses and that is ok

**Guidelines for deciding between bupropion vs. mirtazapine**

**Avoid bupropion if ...**
- h/o seizure
- Active eating disorder (because of risk of seizure)
- Prominent symptoms of restlessness, anxiety, agitation and/or insomnia

**Prefer bupropion if ...**
- Co-morbid depression
- ADHD diagnosis/symptoms
- Prominent daytime somnolence
- Concern for weight gain
- Smoking cessation is desired

**Avoid mirtazapine if ...**
- Concern for weight gain

**Prefer mirtazapine if ...**
- Co-morbid anxiety disorder and/or depression
- Prominent insomnia
- Weight gain is desired
