

# How to Monitor Treatment Intensification

- TIS: treatment intensification score – typically measured in uncontrolled patients
- Several ways to measure depending on data collection and reporting capabilities, for example:
  - % of visits with uncontrolled BP where titration done
  - % of patients on combination pills
  - % of uncontrolled patients on 2, 3, 4 meds

# TIS: Titration Rates by Provider

If the patient is seen by PCP:

- SBP 140-149 titration rate is 39.6%
- SBP 150-159 titration rate is 46.3%
- SBP 160-169 titration rate is 50.7%
- SBP  $\geq 170$  titration rate is 61.1%
